### About the Training Course

The modern industrialized world would be inconceivable without the role of catalysts. The development of materials for the modern societies will only be technically, economically, and in sustainable manner is viable by means of specific catalytic pathway. Catalysts play a very important role in industry not only in terms economic benefits but also in minimizing the environmental pollution. The successes of basic research in the field of catalysis have a direct and tremendous impact on addressing numerous fundamental issues and social problems encountered by humanity. The fundamental understanding of many catalytic processes is still emerging and there seems to be a new opportunity with the recent development in experimental and theoretical methods. The intention of this training course is to motivate young students and researchers currently engaged in the area of catalysts by providing *in-sight* and fundamental aspect of catalysts with the help of eminent/ experienced/ successful experts in and around India from many leading institutes. The experts will address some fundamental questions in catalysts development relevant to various chemical processes.

### About Central University of Kerala

The Central University of Kerala, Kasaragod, came into being in 2009 under the Central Universities Act 2009. The University is founded on the noble vision of a "Caring Wisdom" and is guided by the haughty ideals of academic and social commitment, moral steadfastness and intellectual and spiritual enlightenment, as reflected in its vision. It is located in a region characterized by linguistic and ethnic diversity and cultural richness. The University seeks to harness the local resources - human, intellectual, social, artistic and cultural - while bringing in the best that is globally available, thus maintaining a fruitful, symbiotic relationship that needs an educational uplift. The campus of the University is located at Tejaswini Hills, Periyar P.O., Kasaragod on the 310 acres of land allocated by the Government of Kerala in 2012. North Malabar region, being one of the backward districts of Kerala, need holistic support for development especially in the area of education, health infrastructure and technologies, which are the main focuses of University since its inception.

### About Department of Chemistry

The Department of Chemistry (DC) started functioning at Riverside Transit Campus, Padnekkad with the admission of first batch of M.Sc. Chemistry students in 2013, and in 2018 the department has shifted to permanent campus at Sabarmati Building, Tejaswini Hills, Periyar P.O. Chemistry provides immense scope for study, research and gainful employment in various sectors and being a branch of prestigious Central University of Kerala. DC offers excellent opportunities for pursuing the Master's programme and doctoral research programme (Ph.D). A team of dedicated faculty of the Department provides the students with rigorous instruction and training to equip them specialized in theoretical principles, experimental and analytical skills. Laboratory facilities and infrastructure match the best available elsewhere which include a variety of sophisticated analytical and spectroscopic instruments viz., - Atomic Absorption Spectrometer (AAS), Fluorescence, FTIR, and UV-VIS spectrophotometers, CHNS Elemental analyzer, Gas chromatograph, Thermal system (TGA & DSC), electrochemical work stations, Muffle Furnaces, Rotary Evaporators and various other minor equipments. Overall, the M.Sc. Chemistry programme aims to provide the students with a firm grounding in the theoretical principles besides facilitating the development of analytical dexterity through rigorous hands-on-training on sophisticated analytical instruments. It is rendered unique through application-oriented laboratory exercises designed to enable students acquire the skills essential to pursue successful professional careers in teaching, research or industry, in fields as diverse as medicine to materials, agriculture, environmental management, biotechnology, nanoscience, renewable energy etc. DC also offers various specialized elective courses like Industrial catalysis by molecular sieve materials, Nanomaterials, Renewable Energy, Materials Chemistry, Polymer Chemistry, Green Chemistry, Crystallography etc. At present the department have six vibrant faculties specialized in different area of chemistry such as heterogeneous catalysts development, surface chemistry, polymer chemistry, nanoscience, computational chemistry, supramolecular chemistry, dye sensitized solar cells, ultra-fast electron and energy transfer reactions, catalysis and CO<sub>2</sub> capturing, coordination chemistry etc. All together the faculties have published about 300 publications / books / patents in a highly reputed peer-reviewed international Journals. At present the Department is running 5 major research projects supported by DST-SERB, CSIR.
