Out-migration of lambani community: an observation

- [S. Madar, A. K. Mohan](#)
- Published 2016
- Geography

Lambani is a one of the biggest traditional tribal group in India; they spread throughout India with different names like Lamani, Lambadi, Lambada, Labans, Bhanjara, Goura Lobhanas, etc. The name of Banjara has derived to them from Sanskrit word of Banaj/Vanijya (Trading), because of their traditional occupation. Similarly the name 'Lambanis' came from the occupation they practice. They were trading and were transporting Lavan (salt) and therefore the derogatory forms are attached to them as Laban/ Laman, etc. They are identified as a nomadic tribe earlier, so migration is primary and more reserved occupation for livelihood. In Karnataka state Vijayapur district have the highest number of Lambanis population whereas more than half of people are seasonal migrating to Maharashtra and Goa. Main cause for migration is low rainfall rate, non-effective implementation programs, less payment wages, regional imbalance in development, etc. Hence, consequences are; high school dropout rate, less care elderly and special persons, poor sanitary condition housing at migrated place etc. In order to understand the problem of the study was carries specific objectives like, to know demographic details of the community and district, to understand causes and consequences of out migration, to assess the socio-economic conditions of the respondent and to develop the community development model to the welfare of the community. The study carried two taluks in Vijayapur district and on HDI indicators, again 33

percent of villages (Tands) selected for the study with systematic random sampling techniques used while data collection. The universe consists of 3272 households among them 824 migrated families selected for the study. While interacting with the respondents, the several observations are made. These observations are out of prejudices. Researcher felt that these observations are quite important in the point of in-depth study. Some of the observations are highlighted in the present paper. The study also observed few challenges faced by the respondents i.e., societal discrimination, family isolations, poor sanitary conditions, less care children and elderly

etc. Collapse
